
Transit Manager Documentation

Release 1.2.4

Gaston Avila

Jul 24, 2018

Contents

1	Installation	3
2	Getting Started	5
2.1	Demo	5
3	Indices and tables	7

Transit Manager is a web application used to store, edit and publish public transit information. It's main goal is to make public transit data available in the GTFS format so routing providers can make use of it.

Contents:

CHAPTER 1

Installation

This part of the documentation covers the installation of Transit Manager.

Clone the project and move into the new folder using:

```
git clone https://github.com/avilaton/gtfseditor.git
cd gtfseditor
```

which will get you the latest version.

Create a new virtual environment (we named it `gtfseditor` but you can name it anything you like) and activate it using

```
mkvirtualenv gtfs
```

You should now see your command line prompt changed to something like

```
(gtfs)$
```

Install the projects dependencies using

```
pip install -r requirements.txt
```

You can now run the server using

```
honcho start
```

and open your web browser at <http://localhost:5000> .

CHAPTER 2

Getting Started

2.1 Demo

There might be a demo running at <http://gtfseditor.herokuapp.com>. The admin interface is at <http://gtfseditor.herokuapp.com/editor> and the credentials are

<code>username: admin@gtfseditor.com</code> <code>password: admin</code>

CHAPTER 3

Indices and tables

- `genindex`
- `modindex`
- `search`
